SAVING TIPS
on electric air conditioning

Central Systems

1. Set thermostat on 78°, or higher.
2. Have equipment checked seasonally by qualified serviceman.
3. Check filter every 30 days. Clean or replace when dirty.
4. Close draperies and blinds to keep out direct sunlight.
5. Keep fireplace damper closed.
6. Proper home insulation keeps heat out, cuts energy use.
7. Weatherstrip doors and windows. Caulk cracks.

Window Units

Follow above suggestions, plus these:

8. Place unit where it'll get as little direct sun as possible.
9. Aim air outlets at lower half of doorway to next room to allow warm air from that room to enter at the doortop for recooling, recirculation.

Conserve electricity and you help conserve one or more of the fuels needed to produce it. Conserve fuels and you help assure that there will be enough to meet essential needs for electricity in the future.

If you would like additional information on conserving electricity, call the Customer Service Representative in the TP&L Office.
